

PROPOSED CONCEPT 1

Radial Gnatcatchers

Proposed Location:
IRIS AVE & KAISER
(HOSPITAL & MEDICAL OFFICE
ENTRANCE)

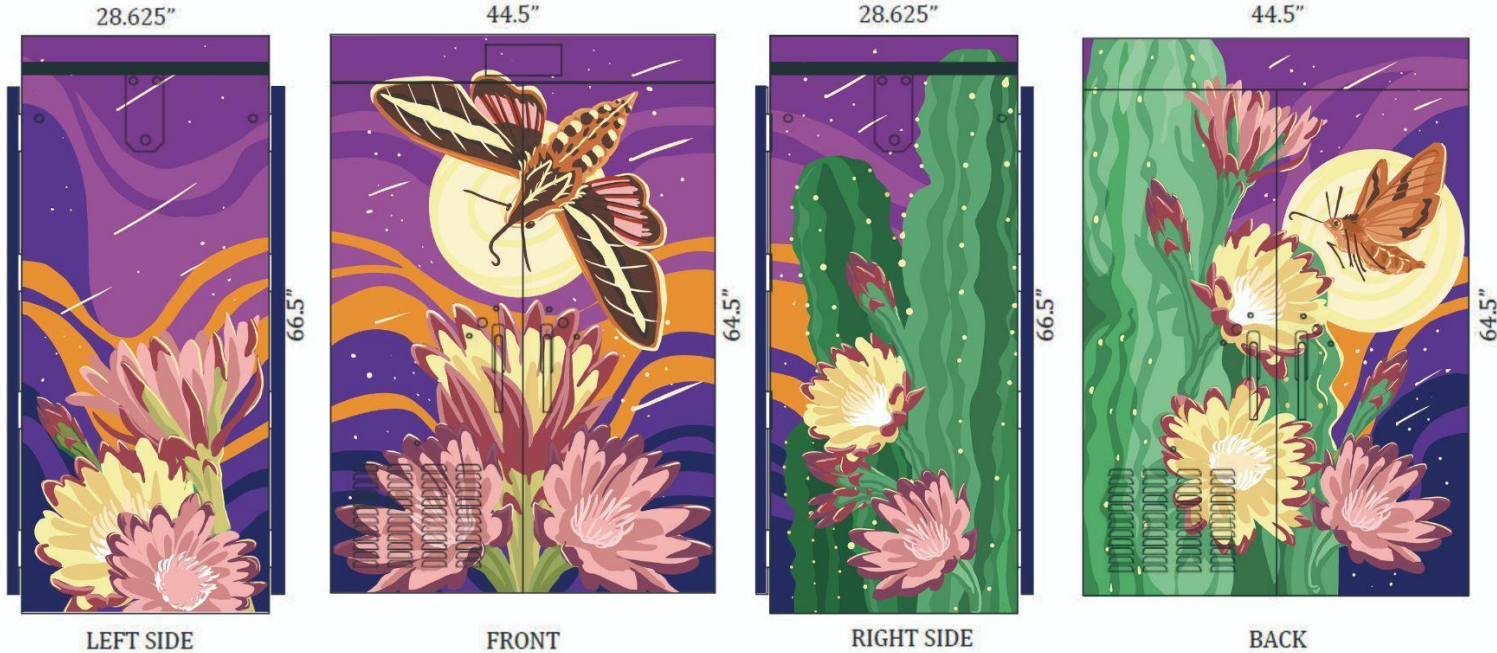

Description

Radial Gnatcatchers is a colorful depiction of gnatcatchers, a local species of bird, accompanied by abstract representations of coastal sagebrush. A radial sun encompasses the birds and plants in a layered pattern.

PROPOSED CONCEPT 2

Night Bloom Dancing with Moths

Proposed Location:
IRIS AVE & TRAIL XING
(JUAN BAUTISTIA TRAIL)

Description

Night Bloom Dancing with Moths is inspired by a *Cereus Peruvianus* cactus blooming its flowers at night. I created a night scene with sphinx moths pollinating the flowers under a bright moon and shooting stars. The sky's colors dance across the design to suggest movement.

PROPOSED CONCEPT 3

Gila Talavera

Proposed Location:

PERRIS BLVD & IRIS AVE

Description

Gila Talavera depicts local lizard species, Gila Monsters. Here I wanted to create a fun design with bold lines based on the unique lizard with patterns inspired by Mexican talavera pottery and design. Gila Monsters are native to both the US and Mexico, and so the design connects to both of my cultures being a Chicana.
